

# Kobe Creations - Senior Coding Challenge

Your challenge is to create a simple CRUD API and a single page application to consume it. It needs to be able to track and show progress of customer orders.

- A user should be able to place new orders.
- An administrative user should be able to update the status and manage an order.
- A user should be able to view and track the progress of their orders.
- Orders need to include at least a title, status and description. Order lines are not necessary.

## Requirements

- You must use PHP (Lumen) for the backend and Vue for the frontend (an optional starter template is provided to speed up setup).
- Please include a readme with all relevant documentation like setup and usage instructions.
- Use some form of user authentication

## Assessment Criteria

- Submission meets requirements.
- Submission demonstrates good knowledge of RDBMS design, and indications of design patterns.
- UI is easy to understand and simple to use
- Submission shows good understanding of web security
